

Supplementary material of "Anchor Frame Bridging for Coherent First-Last Frame Video Generation"

Code

We release the source code of AFB, which is implemented using Pytorch. We provide configuration and sampling scripts so that others can easily reproduce our experimental results.

Demo

We conduct a [demonstration](#) to introduce our Anchor Frame Bridging (AFB) method. The video also concludes with a side-by-side comparison highlighting the improvements achieved by our method over the baseline.
